

ATTENTION TRAPPER:

EXCESSIVE DRY FIRING OF THIS TRAP MAY BREAK THE WELD IN THE JAWS. IF DRY FIRING THIS TRAP IT IS RECOMMENDED THAT YOU USE SOMETHING SOLID WITH A PIECE OF RUBBER, SIMULATING A COON'S FOOT. (SCM tested 100 Firings as described with NO Breakage)

OTHER ADJUSTMENTS:

PAN TENSION: Useful in preventing small animals and birds from firing the trap as well as nearly all toe catches. One to two lbs for Coon. If you elect to use pan tension (recommended by SCM) adjust your trap so that when the pan is pulled down to jaw level, there is 1/32" or less of engagement between the pan and dog. You should be able to jar the trap slightly without it firing.

DOWN PAN STOP: Screws and Nuts (8-32 x 5/8") are included with each dozen. SCM recommends you install the Down Pan Stop. It is useful in preventing toe chewing and in conjunction with the proper pan tension will allow the trap to fire without noticeable pan movement.

HAPPY TRAPPING
